Profile

Computer Science graduate and Quality Assurance Consultant with experience in software testing, test automation, and quality assurance of AI-powered applications. My background combines software engineering and quality practices with hands-on work in machine learning and high-performance computing, including CUDA, MPI, and OpenMP-based acceleration of neural network workloads. Experienced with Java, Python, TypeScript, JavaScript, SQL, Git, and REST APIs. Currently expanding my expertise in modern test automation, CI/CD, and AI systems, with long-term interests in Software Development Engineering in Test (SDET), AI Quality Engineering, and the deployment of reliable and efficient AI systems.

Professional Experience

06/2025 – Present Qatar (Remote / Lebanon)	Quality Assurance Consultant <i>Noema Consulting</i> - Designed and executed manual test cases for web applications and new feature releases. - Identified, documented, and tracked software defects through Jira while collaborating directly with developers to ensure issues were clearly communicated and resolved. - Performed regression testing and validated bug fixes before deployment. - Developed automated test workflows using Katalon Studio to reduce repetitive testing effort. - Worked in Agile development environments, coordinating testing activities with developers throughout feature development, sprint cycles, and releases. AI Chatbot Testing & Optimization: - Took primary QA responsibility for a full AI project involving LLM-based chatbots and agent systems. - Worked directly with developers throughout development and releases, evaluating AI responses, identifying issues, and communicating findings for resolution. - Designed and executed scenarios to evaluate response accuracy, relevance, consistency, edge cases, and overall system behavior. - Created structured prompts and guidelines to improve consistency and quality.
12/2024 – 02/2025 Remote / Lebanon	Full Stack Developer Intern <i>Integrated Digital Systems (IDS)</i> - Built UI screens and reusable components using React. - Integrated frontend with backend REST APIs for data display, and profile updates. - Worked with MySQL for storing and retrieving user information. - Used Git + GitHub for version control (github link).
01/2025 – 04/2025 On Site / Beirut, Lebanon	IT Support Intern <i>Lebanese American University (LAU)</i> - Assisted students and faculty with troubleshooting software, device, and network issues. - Prepared computer labs and installed required applications for classes and exams. - Supported classroom devices (projectors, PCs, speakers) to ensure daily operations.
06/2024 – 08/2024 Remote / Lebanon	Frontend Development <i>CodeAlpha and CodSoft</i> - Developed interactive UI pages using HTML, CSS, and JavaScript based on assigned tasks. - Strengthened understanding of component layouts, styling, and user interaction logic. (github link)

Relevant Projects

Community Web Platform (Full Stack)

React · REST API · MySQL

Developed user login, profile pages, and data viewing screens. Integrated front-end components with backend endpoints and managed state updates. ([link](#))

Sentiment Analysis on IMDB Reviews - TF-IDF + Logistic Regression / Random Forest

Preprocessed text, extracted TF-IDF features (top 5,000 words), and trained Logistic Regression and Random Forest models for binary sentiment classification. Achieved LR accuracy ~90% and AUC 0.962, compared model performance and runtime, and analyzed failure cases (mixed sentiment, sarcasm/context). ([link](#))

Parallel CNN (LeNet-5) Acceleration - MPI / OpenMP / CUDA C

Accelerated key CNN layers (convolution and fully connected) using distributed, multi-core, and GPU parallelism. Focused on optimizing the most compute-heavy operations. Performed performance evaluation vs sequential baseline, reported speedup/scalability/efficiency and ensured correctness by output comparison. ([link](#))

File Sharing Server (Flask GUI)

Developed a file sharing system with upload/download progress tracking and automatic resume for interrupted transfers. Implemented chunked data transfer and server-client communication. Hosted the server on local network to allow access from multiple devices. Tested file transfer reliability and recovery from interrupted connections. ([link](#))

Clinic Platform/CPC (Android App + Website)

Developed a full role-based clinic management system consisting of both an Android application and a web platform, supporting patients, doctors, pharmacists, and lab technicians. Built screens and workflows for login and authentication, appointment scheduling, medical record access, prescription handling, storage and inventory management, and lab result submission. Implemented secure credential recovery flows (email/phone) and integrated the application with backend APIs built in PHP and MySQL for data consistency across roles. Also created a real-time messaging system using a custom TCP socket server to enable staff communication. On the web platform, developed dashboard interfaces, data display pages, and administrative controls to manage user access and clinic operations through the same backend. ([AppLink](#)) ([WebsiteLink](#))

Skills

Programming

Java, Python, JavaScript, TypeScript, PHP, C, C#

Web & APIs

React, Node.js, Flask, HTML, CSS, REST APIs, Postman

Data & Development Tools

SQL, Git, GitHub, Jira, Confluence, Collaboration

AI & Machine Learning

Prompt Engineering, Generative AI, Agentic AI, Text Classification

Testing & Quality

Manual Testing, Test Automation, AI Application Testing, Test Cases

Systems & HPC

Linux, Android (Java), CUDA C, MPI, OpenMP

Education

2022 – 2025

Beirut

B.Sc. in Computer Science

Lebanese American University (LAU) · USAID Scholarship

Key courses: Algorithms and Data structures, Objects and data abstraction, Web and Mobile development, Parallel Programming.

Languages

Arabic — Native

English — Fluent (IELTS - C1)

German — Beginner
